OPTICON

OPN2005
Quickstart Guide

USB Connector

Clear/Function Key

Scan Key

LED Indicator

Laser Engine

STEP 1
Scan the code below with the OPN2005 to choose Bluetooth-HID (Keyboard) mode.

STEP 2 (Only needed for iPhone/iPad)
Use the following label to put your OPN2005 in iPhone mode. This makes it possible to toggle the on-screen keyboard while connected.

STEP 3
Hold the Clear/Function key (see diagram above) on the OPN2005 for five seconds, until it beeps and the LED begins flashing blue.

STEP 4

Turn on Bluetooth on your tablet or phone and have it discover your OPN2005. Once discovered, select the OPN2005 on your phone or tablet.

Once chosen, the OPN2005's laser will light up and you will hear a steady beep. Use the number barcodes provided on the right to scan the displayed pin code, one number at a time. When you are done, scan 'END' to complete the pairing.

END

Your OPN2005 is now paired and connected. The LED blinks blue slowly to indicate a connection is active and working. Any barcode data you scan will now appear on the screen as if you had typed it. Please have an application open that allows typing data.

Note, if for any reason your OPN2005 becomes disconnected with your other device (e.g. host device goes to sleep, battery loss, etc.), you can simply hold the scan key for five seconds to reestablish the connection.

For OPN2005 firmware updates, please check Opticon's website at www.opticon.com 'Service and support' 'Software'/ 'Manuals' > OPN2005
