Image Capture - Class-leading image quality and image transfer speed provide crisp images in less than one second.

Connectivity – The most popular interfaces in one model. Uses the standard Hand Held Products cable set.

Intelligent Aiming Options - Distinctive green aimer provides superior illumination contrast and makes image capture applications fast and intuitive.

The IT4200 area imager from Hand Held Products combines the versatility of area imaging with the speed and cost of linear scanning for retail and commercial applications. Powered by Adaptus™ Imaging Technology, the IT4200 is full featured, fast, and cost effective.

Current and future manufacturing, retail, and commercial applications will involve much more than linear bar codes. EAN•UCC composite codes are beginning to appear in food stores, PDF codes are used for age verification in restricted item sales, and postal bar codes are used to sort mail. The omni-directional reading capability of the IT4200 allows fast and easy reading of all these codes. Simply point and shoot. There's no need to align a scan line, or wait for a raster beam to open up.

Whether capturing a signature as proof of delivery, taking a picture for identification, or electronic data storage, image capture is an important part of current and future solutions. The Adaptus Imaging Technology powered IT4200 is equipped with Hand Held Products fifth generation imaging for best-in-class image quality and image transfer speed, all at very economical prices. Image capture has become a mainstream application requirement. Trust Hand Held Products to provide the industry's best imaging.

With no moving parts, the IT4200 is as durable as it is versatile. Hand Held Products has a reputation for products that are tough as nails. The IT4200 is no exception, and will provide years of service at a low cost.
